

HeartBeat.bio AG (HBB) has built a highly scalable **human organoid and AI-supported drug discovery platform** for developing **first-in-class drugs for heart failure faster, less costly and with a higher probability of success in clinical trials**. Our core technology is based on the **worldwide first self-organizing heart-chamber-in-a-dish models (Cardioids)** which resemble the human physiology of the different compartments of the heart while allowing for the cost-efficient and large-scale *in vitro* analysis of crucial parameters associated with cardiac diseases. We believe our **Cardioid Drug Discovery Platform and our animal-free, human-centric approach** have the potential to **revolutionize the current cardiac drug discovery paradigm**.

We work in a dynamic and collaborative environment at the **Vienna BioCenter (VBC)** and are looking for highly motivated candidates who share our excitement for human (cardiac) organoids and making a difference in the lives of heart failure patients. Currently, we are looking for a **student interested in pursuing a master's thesis internship** with a strong interest in disease modeling.

Candidates should:

- Have completed a Bachelor's degree (or equivalent) in the life science fields
- Experience with stem cells or iPSC cell culture experience is beneficial
- Experience with cardiac biology and stem cell differentiation is beneficial
- Have excellent communication and organizational skills
- Enjoy working in a high-performance team
- Have a willingness to stay for a year

Excellent English is required since we are working in an international scientific environment. German language skills are a plus but not mandatory.

If you're interested in joining our exciting start-up company, please send your CV, letter of motivation and, if possible, the names and contact details of two references to Martina Cirigliano (martina.cirigliano@heartbeat.bio). Candidates will be evaluated on a rolling basis.

We look forward to hearing from you.
